HARSH DHARNIDHARKA

Mumbai, Maharashtra | dharnidharkaharsh@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

AI Engineer with hands-on experience building LLM-powered applications, agentic workflows, and retrieval-augmented generation (RAG) systems using LangChain and LangGraph. Skilled in Python, prompt engineering, evaluation, and retrieval optimization, with demonstrated ability to improve system accuracy, reduce latency, and automate multi-step agent pipelines. Seeking full-time AI Engineer opportunities.

TECHNICAL SKILLS

Programming: Python, SQL

Frameworks & Libraries: LangChain, LangGraph, FastAPI, Streamlit, Pydantic, Hugging Face Transformers

LLM & GenAI: OpenAI API, Groq, Sentence-Transformers, RAG Pipelines, Agentic Workflows, Prompt Engineering, MCP (Model Context Protocol), OpenAI Agents SDK

Retrieval & Search: BM25, Dense Retrieval, Hybrid Search (RRF), Reranking (Cross-Encoders)

Vector Databases: Qdrant, Pinecone, ChromaDB

Tools & Platforms: Git, GitHub, Docker, LangSmith, VS Code, PyCharm, Google Colab

Deployment: Render, Railway

PROJECTS

PhoenixAI — Autonomous AI Coding Agent | *LangGraph · OpenAI API · Docker · Pydantic*

- Built a multi-agent coding system in LangGraph implementing a generate → execute → critique loop that writes code, runs it, and automatically diagnoses failures.
- Engineered an iterative self-correction cycle that retries failed executions up to 5 times, regenerating fixes from runtime error feedback before gracefully terminating on persistent failure.
- Designed Pydantic-validated state schemas to enforce structured, type-safe communication across agent nodes, reducing malformed outputs and runtime type errors.
- Used Docker-based sandboxing to isolate and safely execute LLM-generated code, and integrated LangSmith tracing for full observability into agent decision loops.

EvidentAI — RAG System with Evaluation & Monitoring | *LangChain · OpenAI API · Qdrant · BM25 · Reranker · LangSmith · Streamlit*

- Developed an end-to-end RAG pipeline with document ingestion, chunking, hybrid retrieval, reranking, and answer generation.
- Reduced latency from 43s to 8s (~81% improvement) by optimizing prompting and replacing heavy components.
- Improved evaluation score from 0.54 to 0.98 using reranking and prompt optimization, validated on a 50-question benchmark dataset derived from Anthropic's Constitutional AI principles.
- Integrated LangSmith for tracing and debugging retrieval and generation failures.
- Built a CI/CD evaluation pipeline that rejects builds when score falls below 0.80, enforcing quality thresholds.

EDUCATION

B.Sc. in Information Technology, Thakur Shyamnarayan Degree College, University of Mumbai | 2023 – June 2026
CGPI: 8.68

HSC (Commerce), Thakur College of Science and Commerce, Maharashtra Board | 2021 – 2023
69.33%

SSC (ICSE), RBK School, Mira Road | 2021
82%

ACHIEVEMENTS

- Gold Medalist at the National Karate Championship, representing Maharashtra.

CERTIFICATES

- AI Fluency, Anthropic (March 2026)
